

Panasonic Digital Healthcare Symposium

Panasonic is pleased to invite you to its inaugural Digital Health Symposium. The symposium will also include the launch of Panasonic's first mobile clinical assistant, the Toughbook CF-H1.

Come and hear from leading experts in the area of ehealth on how mobility has helped improve the way care is provided in the UK and how Australia can take advantage of leading technologies to help improve our healthcare system.

Reasons to attend:

- See and hear real world examples of how new technologies can help improve healthcare inside and outside the hospital
- Listen to how the NHS has revolutionised community care using mobile technology
- Learn how the NHS implemented mobile technology to improve the quality of care provided and enhance nurse productivity.

Who should attend:

- Doctors
- Nurses
- Allied Health Workers
- Health Administrators and Executives
- Aged Care Providers

Keynote Speaker: Barbara Stuttle CBE, South West Essex NHS, UK

Barbara Stuttle is the Director of Quality & Nursing for South West Essex Primary Care Trust in the UK, and has a nursing background spanning over 34 years working mainly in the Community and Primary Care Services. Until this year Barbara was one of two National Nursing and Midwifery Clinical leads working

for NHS Connecting for Health, focused on ensuring the new technologies reflect and support rapidly changing nursing practice.

Facilitator: Dr George Margelis MBBS M.Optom GCEBus, Intel

George was appointed Industry Development Manager for Intel's new Digital Health Group in November 2005, allowing him to take an active role in changing the way healthcare was delivered in Australia.

Prior to this George was very active in the healthcare informatics arena as the CIO of a private hospital group in Sydney. George is also a board member at the state and national level of the Health Informatics Society of Australia.

DEMONSTRATIONS ON THE DAY:

Telstra's Next IP™ and Next G™ networks are facilitating a transition to integrated, user-generated and accessible real-time information for the medical profession. This is providing enhanced service delivery and efficiency and significantly reducing diagnostic times. Working closely with the healthcare industry, Telstra has developed many innovative solutions that lead to:

- Increased mobility of healthcare workers
- Improved service delivery with significantly reduced diagnostic times
- Access by patients in remote areas to professional health care services
- Improved access to clinical applications and patient health from the bedside (currently being trialled)
- Improved health administration
- Less pressure on hospital beds.

iSOFT Group Limited is among the world's largest providers of advanced application solutions in modern healthcare economies.

iSOFT works with healthcare professionals to design and build software applications that answer all of the difficult questions posed by today's healthcare delivery challenges. Our solutions act as a catalyst for change, supporting free exchange of critical information across diverse care settings and participating organisations.

The Group's sustainable development is delivered through careful planning, in-depth analysis of the market, and anticipation of our clients' evolving requirements.

We are working with healthcare leaders around the world to integrate the healthcare information environment. Our solutions, technologies, and collaborative expertise enable healthcare organisations to better manage healthcare information—and make it possible for people to enhance health and wellness throughout their lives.

By connecting people and information in new and important ways, we enable healthcare organisations to deliver higher quality, more accessible, and more economical care and meet their clinical and business objectives.

Meridian Health Informatics is a leader in providing Clinical Electronic Health software solutions in Australia and internationally. Our award winning software has been successfully used to develop two obstetric, drug & alcohol and various sub-acute/non-acute data management systems where users have configured the system exactly to their unique requirements.
